

How to Launch and Play

Launching

We have included the BlackBox.jar file in our submission.

In order to execute this file, you need to run the following command:

Unset

```
java --module-path "path\to\javafx\lib" --add-modules  
javafx.controls,javafx.fxml -jar BlackBox.jar
```

Replacing “path\to\javafx\lib” with the path to the javaFX lib folder installed locally.

We compiled using JDK 20.

Playing

In order to play you press to start, and enter input into the text box. This is currently the extent of ‘playing’ that is possible.
